

PROCLEAN DOLMAR

Removing undesirable aromas from must and wine.

APPLICATION

Off-aromas due to different contaminants and vine's fungal diseases, such as *Botrytis cinerea*, *Penicillium* sp, often produce molecules with undesirable aromas, that could affect to final wine quality.

Molecules associated to aromas from mildew, earthy, mushroomy, etc. that could mask positive aromas of wines, may seriously affect the organoleptic quality.

These compounds could cause an unpleasant effect in wines, not only by nose but also by mouth, reducing the value of them.

Dolmar launches **Proclean**, a product developed and formulated after a thorough selection of raw materials with high absorption power, as charcoal and yeast barks together with copper which helps removing the off-aromas.

RECCOMENDED DOSE

Proper dose will depend on the level of treatment to achieve. Preliminary tests in laboratory are recommend.

Dose: 20 – 80 g/hl.

Máximum legal dose:l: 90 gr/Hl,
10 gr/Hl of Proclean Dolmar provides 0,11 mg/L of Cu in wine.

DIRECTIONS FOR USE

Disperse **Proclean Dolmar** in 10 times its weigh in wine.

Help the product to keep in suspension in the wine during first 5 days of treatment for a better efficacy of it.

After treatment, let the charcoal to precipitate and practice a clarification or filtration to remove it totally.

PACKAGING

Bag 1 kg.

Bag 5 kg.
