

ANTIOX WHITE DOLMAR TANNIN

GRANULATED GALLIC TANNIN | ANTIOXIDANT FOR WHITE WINES

UTILIZATION

TANINO ANTIOX WHITE DOLMAR is composed of granulated gallic tannin which is an exceptional partner in white and rosé wines production avoiding their oxidation.

This tannin offers security to white and rosé musts production especially for those grapes affected by rot.

TANINO ANTIOX WHITE DOLMAR is the perfect formulation at the start of fermentation, where the antioxidant action is essential, and at the first stages of barreling, where the presence of oxygen is still significant.
