

# COLOR TANNIN

## MADE OF QUEBRACHO & GRAPE TANNIN

### APPLICATION

TANIN COULEUR consists to a large extent of proanthocyanidic condensed tannin from the Quebracho tropical tree wood.

Its chemical structure is the most similar to grape tannin itself, thus if it is added when fermentation begins, during the process of extraction of the anthocyanins, those get stabilized through co pigmentation and so get protection from their own oxidation and loss.

Together with the tannin of quebracho TANNIN COLOR results in grape tannin which helps to increase the polyphenolic charge and to stabilize the color in a reliable way.

It is intended for grape harvests with a good sanitary status. DOLMAR COLOR TANNIN is the perfect formula for the beginning of fermentation where the antioxidant action has great importance.

Its granulated form makes dissolving easier.

### DIRECTIONS FOR USE

Dissolve the required amount of OLMAR TANIN into 10 times its weight in must or wine.

Add to deposit and mix thoroughly.

### RECOMMENDED DOSE

In the beginning of fermentation: from 10 to 25 g/hl.

### PRESENTATION

Packages of 1 k, 2.5 k and 10 k.

### CONSERVATION

Keep the container filled with original sealed, protected from light in a dry and odor free place.

Once opened, use the product quickly.
