

FERMICOMPLEX NATUR[®]

NUTRIENT FOR COMMENCEMENT OF FERMENTATION

CHARACTERISTICS

Complex based on:

- Inorganic nitrogen, diammonium phosphate
- Organic nitrogen, Aa inactivated yeast
- Thiamine

DOLMAR FERMICOMPLEX NATUR[®] adds the same nitrogen elements that those directly coming from grapes. They are needed to get both good proliferation and development of yeasts, so obtaining dynamic and safe fermentations.

It is recommended for musts with easily assimilable nitrogen below 200 mg/l. This value depends on the fermentation conditions and should be higher for musts with extreme fermentations such as likely high alcoholic strength, very strong debourbages, etc.

This information does not exempt the user from fulfillment of the legislation and safety measures in force.*

DOSAGE

From 20 to 40 g/hl, depending on the fermentation conditions.

LEGISLATION

Maximum usable dose: 40 g/hl.

INSTRUCTIONS

Dissolve 1 kg of DOLMAR FERMICOMPLEX NATUR[®] into 10 litres of raw must.
Add in the middle of fermentation, during the course of a pumping.

PRESENTATION

1 and 5 kg packs.

CONSERVATION

Keep the container filled with original sealed, protected from light in a dry and odour free place.
Once opened use the product quickly.
