

FERMICOMPLEX RESTART®

SPECIFIC FOR STUCK FERMENTATION

CHARACTERISTICS

Complex based on:

- Yeast hull
- Diammonium phosphate
- Inactivated yeast
- Thiamine

In stuck fermentation processes DOLMAR FERMICOMPLEX RESTART® is an indispensable tool for the growth of the yeasts.

DOLMAR FERMICOMPLEX RESTART® has been exclusively developed to be used in "pied de cuve" protocol advised by DOLMAR.

It is necessary to follow the instructions in that protocol of action and consult with our Technical Staff.

DOSAGE

40 g/hl, depending on fermentation conditions.

INSTRUCTIONS

Dissolve 1 kg of DOLMAR FERMICOMPLEX RESTART® into 10 litres of fermenting must.

PACKAGING

1 kg pack.

STORAGE

Keep the container filled with original sealed, protected from light in a dry and odor free place.

Once opened, use the product quickly.
